

# How to Promote Deep Learning

**Build** on what children already know and help them connect what they're learning to their knowledge.

Children have hands-on opportunities to help care for plants.

Children show interest in and have basic understanding of how plants grow.

The teacher/provider uses a storybook to encourage children to think and talk about what plants need to grow.

**Plan** multiple, related learning experiences to explore the different aspects of a concept.

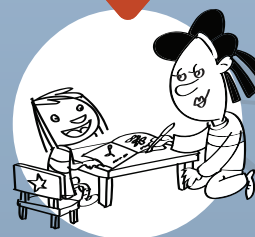

Children learn that plants change in appearance by observing seeds and bulbs.

Children explore what plants need to grow when they plant seeds and help care for the garden.

**Growth and Change of Plants**

Children investigate how plants increase in size when they draw their observations of a growing plant over time.

**Provide** children ample time to explore and understand a concept.
